Abstract:

A group of derivatives for compounds 2-Amino-3-carboxy-4,5,6,7-tetra hydrobenz -othiophene bearing different heterocyclic moieties such as Schiff bases. B-Lactum, 4-thiazolidinone.1,3-oxazepan. The newly synthesized derivatives have been supported by spectral data FT-IR, H^1 -NMR. All the synthesized compounds were screened for their antimicrobial activities against gram-positive and gram-negative bacteria as reference.

Key words: Antimicrobial Activity,2-Azetidinone,3-Oxazepane4-Thiazolidinone, Schiffbases, Tetrazole, Tetra hydrobenzo thiophene.

Introduction:

Heterocyclic chemistry comprises at least half of all organic chemistry research worldwide. In particular, heterocyclic structures form the basis of many pharmaceutical, agrochemical and veterinary products. Cyclohexanone derivatives play an important role in many compounds (1). Many herbicides having cyclohexanone backbone such as tralkoxydim, sethoxydim or clethodim are well known (2,3). In previous work we were synthesis and biological evaluation of tetrahydrobenzo [b].thiophene as anti-cancer agent (4). A large number of tetrahydrobenzo thiophene derivatives (5,6,7) have been found to be important tools of pharmaceutical activity such as antimicrobial, anti-inflammatory and anti HIV. A number of synthetic compounds such as tetrahydrothiophene (8), thiazolidine (9), tetrazole (10), oxazepin (11) have also been played a role exploited for antioxidant activity. Schiff bases is nitrogen analog aldehyde or ketone in which the (C=O) group is replaced by a (C=N) group (12). Has the apparent number of applications in many fields including medicine, life science and chemical sciences and interesting biological activities, such as antibacterial (13), antifungal (14), anticancer (15) and herbicide activities (16). Furthermore derivatives of Schiff base azelidone (B-Lactum) ring (17) are class of important compounds in medicinal chemistry and pharmaceutical field the 4-thiazolidinone scaffold is very versatile and has featured in a number of medicinal chemistry (18).

While the tetrazole is one of organic heterocyclic compounds containing a (5) membered unsaturated ring structure compound of (4) nitrogen atom and one carbon are important role such as antibacterial, antiviral, analgesic, anti-inflammatory (19). Also oxazepin derivatives is a (7) membered ring that contains two heteroatoms (oxygen & nitrogen) that are available in medicinal chemistry and in many pharmaceutical applications (11). Also thiazole and its derivatives are important organic reaction intermediates and they have been widely used as anticonvulsant, antidepressant, analgesic, anti-inflammatory, antiplatelet, antimalarial, antiviral, diuretic and muscle relaxant activity (20). In view of these observations we thought that it would be interesting to synthesize the substituted derivative starting from [2-amino-3-carboxy-4,5,6,7-tetrahydrobenzo thiophene] followed by cyclization of Schiff bases lead to compounds with interesting antibacterial profile.

Materials and Methods:

Melting point has been specified in open capillary Electro thermal apparatus and is uncorrected. FT-IR measurement were recorded on Shimadzu Infrared spectra-84005. H^1 -NMR spectra were obtained with a Bruker spectrophotometer model ultra-shield at 300 MHz in DMSO- d_6 solution as a solvent with the TMS as internal reference in this study were reagents grade and they are available from Sigma-Aldrich and Fluka companies. Purity of the compounds was checked on silica coated Merck-TLC plates using,

chloroform, benzene and a mixture of hexan and ethyle acetate as mobile phase.

Synthesis of compound(1)[ethyl 2-amino-4,5,6,7-tetrahydro-1-benzothiophene-3-sulfinate]: To a mixed of cyclohexanone (0,05mol, 4.9gm), ethyl cyanoactate (0.05mol, 5.65gm) and Sulp -hur (0.05mol,1.6gm)in ethanol(50ml), dipropylamine (0.05mol,5.05gm) was added drop wise with stirring. The reaction was reflux for (10hrs).The

residue of solvent was evaporated and the crystals was filtered off solvent off, purification from ethanol yield (95%), m.p(119-121C), FTIR (KBr,vcm⁻¹): 1734 (C=O)of ester,2847-2978 (CH₂)_{alph}, 3302-3396(NH₂),698(C-S-C). H¹NMR (300MHz, DSO-d⁶, 8,ppm):1.25 (t,3H, COOCH₂CH₃, 4.30 (9,2H,COOCH₂CH₃), 5.5(s, 2H, NH₂), (2.01-2.2) (m,4H,CH₂), 1.7(t,2H,CH₂). The physical properties listed in table (1).

Table1. Physical properties of synthesized compound.

Comp. No.	M.P.°C	Yield%	Recry. Solvent	Color	Molecular Formula
1	119-121	95	Ethanol	Brown	C ₁₁ H ₁₅ O ₂ NS
2	109-112	85	Ethanol +H ₂ O	Yellow	C ₁₀ H ₁₄ N ₄ S ₂ O
3	116-118	60	Ethanol+H ₂ O	Gray	C ₁₀ H ₁₂ N ₄ S ₂
4	212-214	50	Ethanol	Yellow	C ₂₄ H ₂₀ N ₆ O ₅ S ₂
5	230-232	43	Chloroform	Black	C ₂₄ H ₂₀ N ₄ S ₂ OCl ₂
6	250-252	69	Benzene	Off white	C ₂₄ H ₂₂ N ₁₂ S ₂ O ₅
7	205-208	35	Ethanol	Brown	C ₂₄ H ₂₀ N ₆ S ₄ O ₇
8	202-204	40	Ethanol	Black	C ₂₄ H ₂₀ N ₄ S ₄ O ₃ C ₁₂
9	260-262	70	Chloroform	Off white	C ₂₈ H ₂₀ N ₆ S ₂ O ₇ C ₁₂
10	270-272	61	Ethanol	White	C ₃₂ H ₂₈ N ₆ S ₂ O ₁₁
11	244-246	30	Ethanol	Yellow	C ₃₂ H ₂₈ N ₄ S ₂ O ₇ C ₁₂ .

Synthesis of compound(2)[2-[(2-amino-4,5,6,7-tetrahydro-1-benzothiophen-3-yl) sulfinyl] hydrazinecarbothioamide]:Compound(1)(0.01mo, 2.25gm) and thiosemicarbazide (0.01mol,0.91g) in ethanol (30ml) was reflexed for (7h).The solvent was evaporated under reduced pressure and the viscous mass was poured over ice cold water,filtered and purification to give compound(2). M.P.(109-112°C), yield(85%), FTIR(KBr,vcm⁻¹): 1178(C=S), 1645(C=O), 3402-3356(NH₂),3263 (NH), 2985-2897 (CH)_{alph},¹HNMR (300MHz, DMSO-d⁶, δppm): 8.70 (m,4H,NHNHCSNH₂), 7.58 (S, 2H, NH₂) 1.75 - 2.72 (m,4H,CH₂), Table(2).

Synthesis of compound (3)[5-(2-amino-4,5,6,7-tetrahydro-1-benzothiophen-3-yl)-1,3,4-thiadiazol-2-amine]: Dissolve of compound(2) (0.002mol,0.5gm) in solution of NaOH (0.0099mol,3.79gm) in distilled water (30ml) at room temperature. The reaction was reflexed for (30 min.) after than kept overnight at (5°C). The solid, thus separated was recrystallized from (ethanol+water) to give compound(3).M.P.(116-118C)(yield=60%),FTIR(KBr,vcm⁻¹):688(C-S-C),1282(N-N),1448(C-N),1575(C=N),3489-3362(NH₂),¹HNMR(300MHz,DMSO-d⁶, Sppm): 5.75 (S, 2H, NH₂), (2.01-2.5) (m, 4H, CH₂), 1.7-1.95(t,2H,CH₂).Table(2)

General method for the synthesis of Schiff bases(4,5): A mixture of compound(2) (0.002mol,0.54g) and (0.004mol) of the (4-chlorobenzaldehyde, 4-nitrobenzaldehyde) was added in absolute ethanol (20ml) refluxing for

(10hrs). The mixture was cooled and the precipitate obtained purification from ethanol and chloroform. Table(2)

Synthesis of Compound(4):Yield50%,M.P.(212-214)°C,FTIR(KBr,v,cm⁻¹):3228 (NH), 1687 (C=O) of amide,1579(C=N), 3228(NH),1348, 1523(NO₂), H¹NMR (300MHz,DMSO-d⁶, ppm): 11.7 (S,1H,NHCO), 8.08-8.61(m,10H,Ar-H,CH=N), 4.4(S,¹H,NH), 1.3-1.8(m,2H,CH₂).

Synthesis of Compound(5):Yield43%,M.P(230-232)°C, FTIR3281(NH), 1680(C=O),1591, 1572(C=N), 790(C-Cl), H¹NMR(300MHz,DMSO-d⁶S,ppm): 9.91(S,1H,NHCO),5.5(S.1H, NH), 8.37-7.45(m, 20H, Ar-H.CH=N). Table(2)

Synthesis of compound(6): To a stirring of Schiff bases 4(0.001mol,0.5g) with sodium azide (0.002mol,0.13g) and (10ml) tetrahydro furan (THF) was added. reaction was refluxed for (10Hrs.), after that the filtrate was cooled at room temperature the precipitation washed with cold water,purification from benzene,M.P(250-252)°C,Yield69%.FTIR:3360(NH of cyc - lic),3221(NH),1604(C=C)_{ar.},1498(N=N),3055(C-H)_{ar.},2127azidegroup. H¹NMR (300 MHz, DMSO-d⁶,Sppm):8.15-8.68(m,8H,Ar-H),4.3(S,1H,NH of tetrazole), 5.8(S,1H,NH), 3.7(S,1H, C-H of tetrazole), 1.3-1.78(m,4H,CH₂), 2.69-2.72 (t,4H,CH₂). Table(2)

General procedure for synthesis of compounds(7,8): A mixture of Schiff bases(4,5) (0.001mol),(0.002mol) of SHCH₂COOH acid was in (10ml)of dry benzene and refluxed in water bath

for(4hrs.).The product was treated by 10% sodium bicarbonate to give compounds (7,8) dried and recrystallization from suitable solvent. Table(2)

Table 2. Spectral data of the compounds (1-11).

Synthesis of compound(11): Yield:30%, M.P:(244-246)^oC.FTIR (KBr, v,cm⁻¹):1726, 1699 (C=O of oxazpine ring),1233(C-O),1170(C-N),2860(C-H)_{aliph},3100(C-H)_{ar}. H¹NMR (300MHz, DMSO-d₆,S,ppm): 7.0-8.4(m, 18H,ArH), 6.93 (S,1H,C-H of oxazpine ring),1.3-1.78 (m, 4H,CH₂), 2.69-2.72(t,4H,CH₂). Table(2)

Results and Discussion:

The scheme 1 and 2 the proof of identify of synthetic sequence used our laboratories to make ready very important organic combination having

wide spectrum of biological activities. The target of this work was performed by following different strategic, the synthesis routes used in shown in scheme(1).

Scheme 1

Scheme 2

The derivative (1) 2-amino-3-carboethoxy-4,5,6,7-tetrahydrobenzothio-*phene* was synthesized by the react cyclohexanone with ethyl cyanoacetate and sulfur. The structure of derivative 1 with clause by presence by IR spectrum of NH_2 group at $3302, 3396\text{cm}^{-1}$ and carbonyl group ($\text{C}=\text{O}$) of ester

at 1734cm^{-1} . $^1\text{H NMR}$ of compound 1 : 1.25 (t, 3H, $-\text{CH}_3$ ester) , 4.30 (q, 2H, $-\text{CH}_2\text{O}-$) 5.5 (s, 2H, NH_2). The mass spectrum of the derivative 1 showed the molecular ion peak at $Z=225$ (M^+ , 100%) is in accord with the molecular formula of this compound, $\text{C}_{11}\text{H}_{15}\text{NS}$, (225g/mol) Fig. 1.

Figure 1. The mass spectrum of compound(1)

When derivative 1 react with thiosemicarbazide gave derivative 2, Fig. 2 the IR spectrum showed disappearance of the ($\text{C}=\text{O}$) band of ester at 1734cm^{-1} and appearance of double bands

of NH_2 at $3402, 3356\text{cm}^{-1}$ and ($\text{C}=\text{O}$) of amide at 1645cm^{-1} . The $^1\text{H NMR}$ of derivative 2 exhibited signals at 8.70 (m, 4H, NHNHCSNH_2), 7.58 (s, 2H, NH_2).

Figure 2. The FTIR spectrum of compound(2)

Reaction between derivative 2 and NaOH solution afforded thiadazole derivatives 3. The spectrum of derivative 3 showed the disappearance of absorption bands to ($\text{C}=\text{O}$) of amide with

appearance of the ($\text{C}=\text{N}$) at 1575cm^{-1} and ($\text{N}-\text{N}$) at 1282cm^{-1} . The $^1\text{H NMR}$ of compound 3 showed a singlet signal at 5.75 ppm for NH_2 . Fig. (3)

Figure 3. The FTIR spectrum of compound (3)

Fig.4 condensation of derivative 2 with various substituted benzaldehyde in absolute ethanol gave arylidene derivatives 4 & 5.

Figure 4. The FTIR spectrum of compound(4).

The creation of these azomethines show that by the presence in the IR spectra of (CH=N)stretching bands at $1580-1600\text{cm}^{-1}$ add together the disappearance of NH_2 stretching bands. The ^1H NMR of compound 5 fig. 5 display singlet signals at 9.91ppm was attributed to NHCO , 5.5(S,1H,NH), a multiplet signals at 8.37-7.45ppm which belonged to aromatic protons and (N=CH), 2.01-2.5 (m,4H, CH_2), 1.7-1.95(t,2H, CH_2) 22 fig.4 compound4, Schiff bases were building in water bath at (70-75°C) with NaN_3

in dimethyl furan, to give compound6, IR spectroscopy was used characterize structure of the synthesized compound. The tradition of bands at 1579cm^{-1} , ascribe to (C=N)(imine group) stretching frequency is favor proof for the success of this step. It also, IR spectra for this derivative were appears of a strong band at 2127cm^{-1} characteriza -tion stretching frequency of azide group, bands at 1498cm^{-1} were caused by the cyclic(N=N) stretching of tetrazole circular band.

Figure 5. The ^1H NMR spectrum of compound (5)

Band at (3360cm^{-1}) because of (N-H) group. ^1H NMR spectrum of compound 6 shows the following characteristic, the aromatic ring protons as multiple at 8.15-8.68ppm which belonged to aromatic protons and (N-H) proton for tetrazole appeared at 4.3ppm singlet, signal at 3.7 ppm due to the (C-H) proton in tetrazole ring fig 6. Cyclization of derivatives 4 & 5 with thioglycolic acid in the presence of dry Benzene afforded derivatives (7,8). FTIR of compounds shows the arrival of stretching strip of (C=O) group at $1705, 1715\text{cm}^{-1}$ expected thiazolidine one ring and this was the almost all

characteristic evidence for the success of cyclization step. Other typical bands of aromatic system is the showed of $\nu(\text{C}=\text{C})$ at about (1581cm^{-1}), $\nu(\text{C}-\text{S}-\text{C})$ at $709, 661\text{cm}^{-1}$ ^1H NMR of derivative 7 showed singlet signal at (2.75ppm) was attributed to (CH_2) of thiazolidine ring a multiplet broad cast signal at 7.87 & 8.21ppm that has belonged to aromatic protons, singlet signals at 9.8 ppm which was assigned to NHCO , 5.6 ppm was characteristic to N-H proton. Fig.7. Handing of derivative 4 with trimethyl amine and chloroacetyl chloride provide azeti-dinyl compound 9.

Figure 6. The ^1H NMR spectrum of compound (6)

Figure 7. The FTIR spectrum of compound (7)

The structure of compound 9 install by IR spectral data which was display the vanishing band of ($\text{CH}=\text{N}$) in the area 1579cm^{-1} united with the looks of absorption band at 1722cm^{-1} ($\text{C}=\text{O}$) of B-Lactam). The ^1H NMR of derivative 9 make visible signals at

(5.0-5.44ppm) due to azetidiny ring proton, a multilet signals at 7.74 & 8.66 due to aromatic protons. Fig.8 Fig. 9. Schiff bases 4 & 5 react with cyclic anhydrides to give the corresponding addition product.

Figure 8. The FTIR spectrum of compound (9)

Figure 9. The ¹H NMR spectrum of Compound(9).

As a sequence, expected to react with phthalic anhydride to produce oxazepine compounds 10 & 11. The IR spectral of compound point to the looks of (C=O) group band at 1737 & 1726 cm⁻¹ and (C-O) band at (1265 cm⁻¹) and (C-N) band at (1174) cm⁻¹. ¹H NMR of compound 11 showed singlet signals at (6.93 ppm) was attributed to C-H proton of oxazepine ring, multiple signals at 7.0-8.4 ppm which belonged to aromatic protons. Table 2.

2. Antimicrobial Activity:

The antimicrobial activity of the 2-amine-3-cabethoxy-4, 5, 6, 7-tetrahydrobenzothiophene derivatives (2-11) were test by the agar disc-diffusion method against two (G⁺) staphylococcus aureus and staphylococcus epidermidis and two (G⁻) bacteria E.Coli, Klebsiell as microorganism and fungal strains namely candida albicans. Dimethyl sulfoxide DMSO was used as solvent.

The test was commit at (100 μg/ml) conc. The bacteria and fungi were carried out in agar and potato dextrose agar medium and these plate were incubated for 24 hrs. for bacteria and 48 hrs. for fungi at 37°C.

Table 3. Antimicrobial evaluation of compounds.

Synthesized compounds	Inhibition Zone (mm) at 100% μg/mL				
	S.aureus	Grampositive S.epider midis	E.Coli	Gramnegative Klebsiell aspp	Fungi C.albican us
2	----	15	23	13	20
3	9	14	18	----	----
4	----	12	23	----	19
5	18	10	21	10	----
6	13	10	22	14	15
7	----	18	21	20	17
8	20	15	18	22	15
9	19	20	23	19	21
10	22	18	11	14	15
11	17	11	12	19	----
Amoxicillin	17	19	16	17	21

Antimicrobial Activity:

In this study it has been used the amoxicilline drugs as standard antibacterial for comparison with the benzothiophene derivatives that is (Schiff base , azetidinone, thiazolidinone and oxazepan). The results of these compounds are summarized in table(3). It could be observed that all the tested compounds were active towards sepidermidis and compounds (7,9,10) show high activity. All the test compounds were active towards saureus except(2,4,7) while compounds (8,10) show high activity, so only compounds (7,8,9,11) were active toward klebiellasp. On the other hand, All compounds (2-9) has high inhibition toward E.Coli except compounds (10,11) has low inhibition on this kind of bacteria. In addition compounds (2,4,7,9) showed high inhibition candida Fungi.

Conclusion:

The terahydrobenzo thiophene derivatives were prepared and characterization by spectral and four strains of bacteria namely is epidmidis S.Aureus as (G+), E.Coli and Klebsiella SPP as (G-), and it has been comparison with Amoxicillin as caliber drug to reveal the potency of synthesized derivatives. The fungi and bacteria found to be sensitive to all derivatives at lower concentration (100 µmg/mL) but no sensitivity at lower concentration.

Conflicts of Interest: None.

تحضير واختبار الفعالية البكتيرية لمشتقات 7.6.5.4 – تتراهايدرو بنزو ثيوفين الجديدة

اسماء محمد عبدالله

زينب زهير محمد علي

قسم الكيمياء، كلية العلوم، الجامعة المستنصرية، بغداد، العراق.

الخلاصة :

مجموعة من مشتقات التتراهايدرو بنزو ثيوفين تعمل حلقات غير متجانسة مختلفة مثل قواعد شيف، 2-ازيتيدون ، 4-ثيازوليدون، 3، 1-اوكسازيبان. وتم الكشف عن بنية المشتقات الجديدة وتفسيرها بواسطة اطياف الاشعة تحت الحمراء والرنين النووي البروتوني ومطيافيه الكتلة. هذه المركبات تم تقييم انشطتها المضادة للميكروبات ضد الغرام الايجابية والسالبة والفطريات باستخدام اجراء التخفيف الجزئي.

الكلمات المفتاحية : تتراهايدرو ثيوفين، الفعالية البايولوجية، ثايدازول، قاعدة شيف، تترازول، 2-ازيتيدون، 4-ثيازوليدون، 3-اوكسازيبان.
